Setting the Standard

***Flexible Pavement & Quality Assurance  
Section***

## Flexible Pavement & Quality Assurance

### Mission Statement:

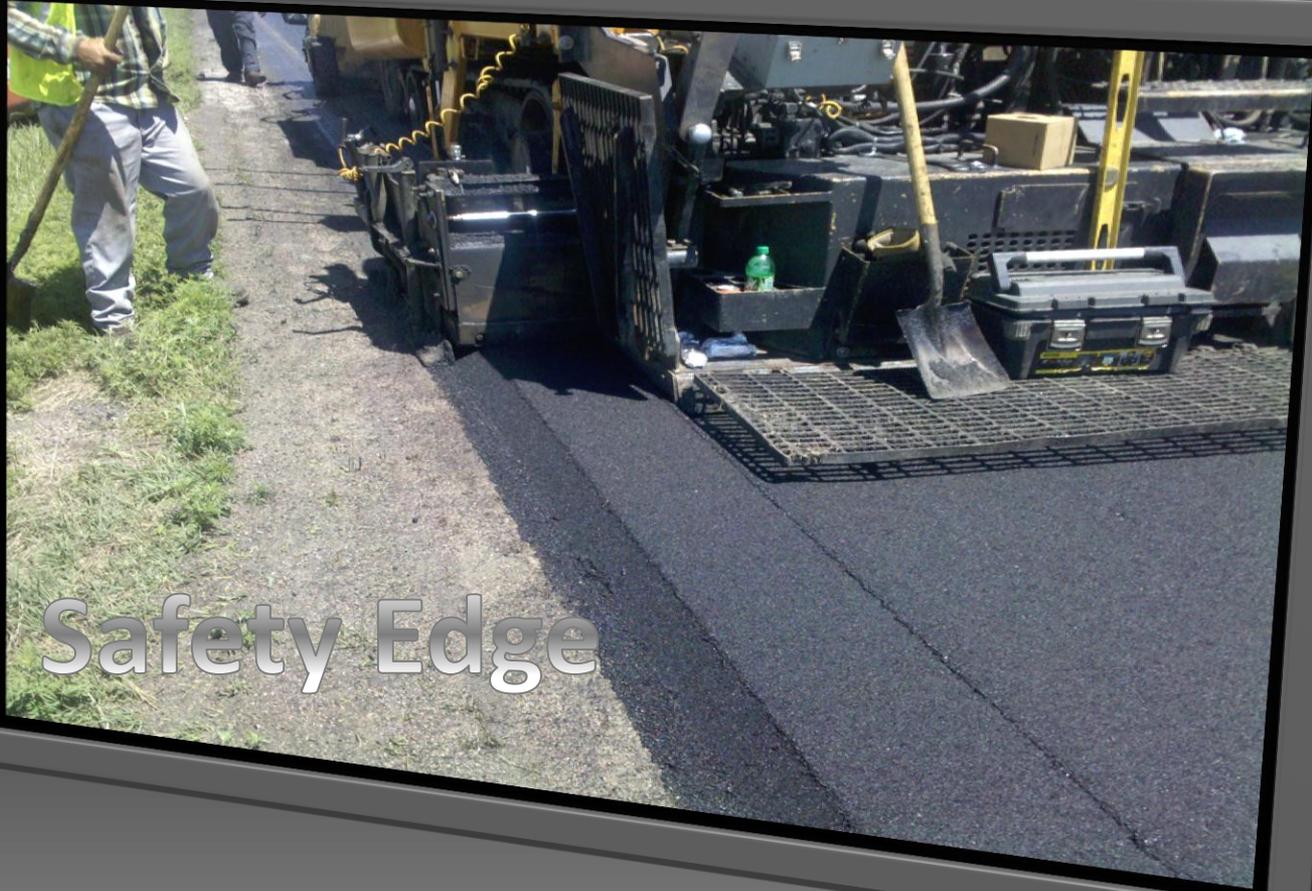

**We actually don't have a Mission Statement for the section, however, this is our philosophy and approach: Collectively we strive to provide the best Engineered Designs and Materials for Roadway Construction and Maintenance Projects for the people of Nebraska and the travelers from all across the United States. We provide training and support to all Divisions for NDOR and all of the field and District personnel, we also support many other city, county, and public agencies in the state. We continue to provide the most cost effective designs, that provide the best performance at the lowest possible initial and operating costs. We continually look to new designs and technologies that enable us to provide the products to reach our goals, and we place a large emphasis on recycling, reusing, material savings, waste reduction, and overall conservation of energy and raw materials.**
