

Superpave Software Download and Management Instructions

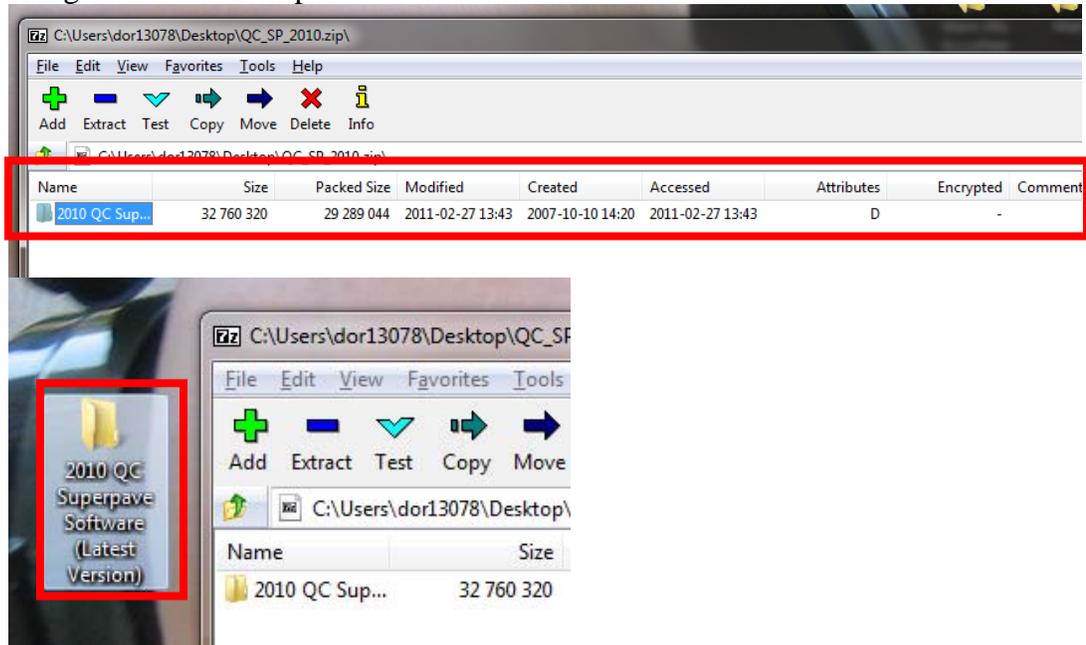

- 1) Download the .zip file from the website (http://www.nebraskatransportation.org/mat-n-tests/pdfs-docs/asphalt_links/QC_SP_2010.zipx) onto your computer desktop. If unable to open the .zip file, download the following software: www.7zip.com

- 2) Double Click on Downloaded File:

3) Drag Folder to desktop:

- 4) The software file contains three folders, one for each grading band (3/8", 1/2", & 3/4") with 14 spreadsheets in each. None of which should be interchanged or mixed.
- 5) If when copying from your desktop to another location, be sure and copy the whole folder for your mix type, including all lots (Lots TS to 4 through Lots 49to52) and the Incentive Disincentive Calculation Sheet.
- 6) Copy the folder onto your hard drive for the appropriate mix type.
- 7) Rename the folder on your hard drive with the project number or name.
- 8) Open the folder to view the 14 spreadsheet icons.
- 9) Right click on all of the spreadsheet icons and select properties.
- 10) Under "General//Attributes" turn off the "Read-only" selection on each and every one of the 14 spreadsheets.
- 11) Click "OK" and get out. This will allow you to place and store project data, otherwise after entering data, it won't allow you to save your work.
- 12) When project is complete, for the submittal copy to the NDOR, you must submit a copy of the entire folder, including spreadsheets that were not used. This is due to other spreadsheets wanting to read data (there or not) and if any of the 14 spreadsheet are missing, sometimes the software will lock up and not allow the user to view.
